Introduction

Blockchain technology gained mainstream attention with the emergence of Bitcoin in 2009. Blockchain is still in the early stages of development, but is quickly making its way into our daily lives. Some financial analysts predict big changes will soon be afoot in the crypto market, as more institutional money enters the market.

According to the latest data from CoinDesk, the average transaction fee for different coins are rising day by day and time for transaction confirmation also increased. The HOGI project aims to solve this problem by introducing a solution that will bring transaction fees down to a more affordable level, increase the speed and security of user funds.

We are proud to offer Ethereum blockchain based solutions for multiple industries around the world. Our BLOCKCHAIN applications is built with a variety of innovative features and technologies that help us develop business solutions to improve the quality of life for people all over the world.

We came with multiple blockchain solutions in crypto world to make people life better.

HOGI as a Digital Currency

Digital currency is a type of money that can be used like cash. There are all kinds of digital currencies, including virtual currencies and private digital currency. However, when we talk about the blockchain of a specific currency, we are referring to the HOGI coin.

In simple terms, the HOGI Coin is a digital currency that can be used to make payments in person and online with no middleman, such as a banking institution. The HOGI Coin was developed over an extensive period of time by professionals with years of experience in blockchain technology.

Like any other currency, cryptocurrencies can be used to pay for goods and services. That is exactly why we have created our own cryptocurrency to power our decentralized network.

HOGI Current Projects and Scope

The HOGI Project is a major player in the cryptocurrency world and will soon become one of the top blockchain financial platforms. A strong and indefatigable blockchain development team is working on this project to make it successful. The team has an impressive portfolio of clients, advisors, and partners, so that HOGI will soon become the leading blockchain financial platform.

There are lots of other blockchain applications that are part of the HOGI ecosystem, such as:

- HOGI coin
- HOGI Wallet
- HOGI GOLD
- HOGI NFT
- HOGI Financial
- HOGI Pay
- HOGI Real Estate Tokenization

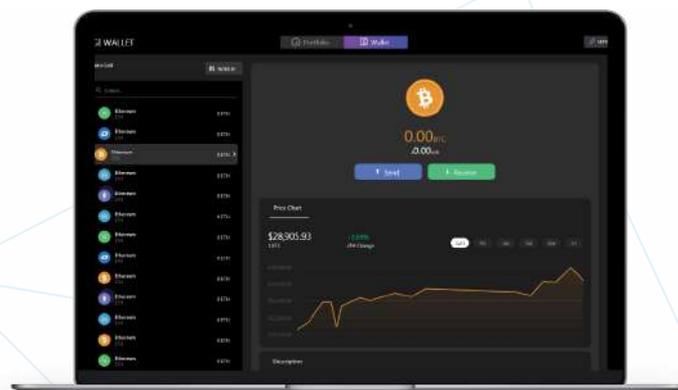

HOGI Coin: Developing & Interacting with Digital Currency

How can we eliminate fraud and manipulation? Our blockchain platform has a public ledger that records all transactions. Users will have full control over their transactions with the ability to send and receive money. Transactions are encrypted and protected with a private key. Each transaction is validated by multiple users before being added to the blockchain.

We have developed our own desktop and mobile wallet solutions based on open-source technologies. Users can store their coins and create backups through these apps.

To ensure a stable and secure form of currency for HOGI Coin, our blockchain platform has a built-in mining protocol. By using the block-producing power of miners, we are able to guarantee that HOGI Coin will remain steady and secure.

HOGI Wallet

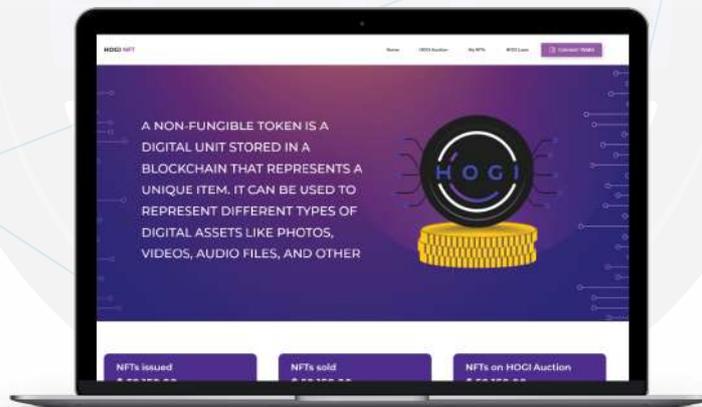

HOGI Coin is a digital currency and we need to store them somewhere digitally. That's where wallets come into play. Our current mobile wallets are in beta testing while our desktop wallets are ready to use.

Our wallet system will keep your digital currency safe and secure on your mobile and desktop devices. It has two important security features: a public key and at least one backup phrase as private key. The public key is like an email address to which anyone can send digital money. The private key is like the password for that email address, and keeps digital money safe and secure on your mobile device.

When you send or receive digital currency, your wallet address is recorded on the distributed ledger of our blockchain network. This is a public record of every transaction you've ever made. It contains no personal information

Our wallets support many top of the line coins like BTC, ETH, DOGE, DASH and many ERC20 tokens including HOGI coin.

HOGI NFT

A non-fungible token is a digital unit stored in a blockchain that represents a unique item. It can be used to represent different types of digital assets like photos, videos, audio files, and other types of data.

HOGI NFT is a non-fungible token (NFT) that can be used to represent a single unit of gold. NFTs will be issued and managed through the ERC721 standard, which implements non-fungible tokens as part of the Ethereum protocol. NFTs will be cryptographically linked to the actual gold they represent, with ownership tracked by the blockchain. The tokenized gold will enable investors to profit from future increases in gold prices.

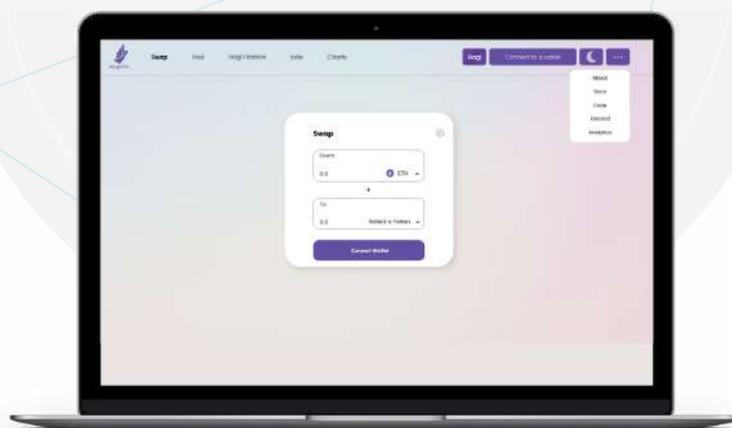

HOGI GOLD

HOGI GOLD offers Gold as a digital asset. On the HOGI GOLD app, one HOGI NFT equals one ounce of Gold.

The HOGI NFT can be moved from the purchasers' wallet, where it is issued, to any on-chain address. Each on-chain address held by Gold will be assigned a specific gold bar(s).

HOGI Financial

HOGI Fin is a decentralized finance and exchange protocol for the Ethereum blockchain. The protocol facilitates automated transactions between cryptocurrencies on the blockchain through the use of smart contracts.

It is a direct trading protocol. There is no need for any centralized party to make trades, as it allows users to trade directly with each other with a high degree of decentralization and censorship-resistance.

HOGI Pay

We are revolutionizing the banking industry. We are building the world's first truly global financial superapp.

Buy crypto, gold, and manage your money in one place. Track spending in real-time with spending analytics.

HOGI Pay is a financial management application that can help you manage all aspects of your finances. It allows you to efficiently manage your cash flow, buy and sell stocks, track investment performance, send and receive money, and even borrow money.

HOGI Real Estate Tokenization

The real estate market is undergoing an explosive period of growth and it's vital for business leaders to stay ahead of the curve with digital innovation. Real estate tokenization refers to the division of a property into tradable shares or digital assets on a blockchain network. In response, many countries are passing legislation to encourage companies to use the technology.

If you have a real asset, we will tokenize it and you can sell to one or more investors after they pass our KYC process. A token will be paired with the real asset and who owns that token will have ownership over their asset – including the right to sell it, trade it, or even give it away.

Issues with Blockchain

Scalability:

The biggest challenge of blockchain development is the technical scalability of blockchains. The current bitcoin blockchain reaches a block size limit of 1 MB every ten minutes, while Ethereum's full archive node loads up over 3 TB and takes up over 3 TB of space. The nodes that want to validate transactions have to download all the data which could pose a problem in the long run.

Transaction costs:

People pay crazy fee up to hundreds dollars to process transactions using digital currency. Those who use exchanges incur such fees when transferring money to external addresses.

Speed:

Because of their distributed and decentralized nature, blockchains have slow speeds and are cumbersome. As the number of users increase, the transactions take longer to process. It can take up to a week for the whole transaction to be completed. As a result, the transaction fees become high and the value of the cryptocurrency starts falling.

Benefits of HOGI Project

Our HOGI coin is now used by many different businesses and retailers. With the ability to pay for gas, groceries, and meals at restaurants, HOGI is becoming an increasingly useful currency online and off.

HOGI Pay is a new app that allows domestic and international users to exchange fiat and digital currencies, bank transfers, and Paypal. HOGI Fin provides a way for users to easily exchange crypto with other cryptocurrencies. HOGI NFT will make it easier for users to buy digital gold and easily buy and sell online.

All of our projects are carried out by using cutting-edge technology, which is scalable, fast and secure. Our customer-focused approach gives them an easy to use interface while maintaining the highest levels of security.

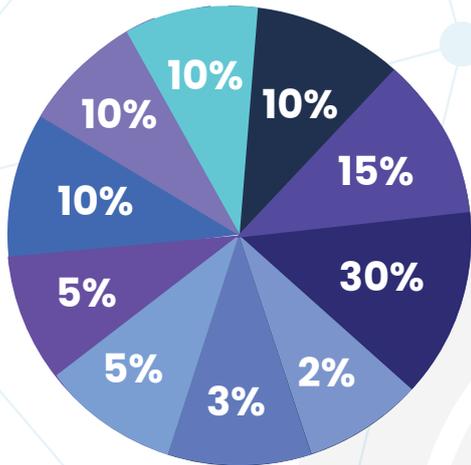

Tokenomics

Coin Symbol	HOGI
Base	ERC20 Token
Coin ICO Price	0,01 0,03 0,05 0,07 Euro
Specifications	Ethereum Blockchain
Total Supply	100.000.000
Max Supply	100.000.000

Token Address: 0xA8AAbf6d833A6Dc4E7DEb44F46788706C5C8581C

Coin Allocation

- Community (Public Sales) 30%
- Liquidity 15%
- Private sales 10%
- Reserves 10%
- Team (Dev / Founders) 10%
- Investors 10%
- Marketing 5%
- Advisors 5%
- Rewards 3%
- Airdrop 2%

RoadMap

HOGI Wallet Development

HOGI decentralized wallet is ready to go into production for our users to manage multiple coins including base token

July 2021

August 2021

November 2021

HOGI Financial Development

HOGI crypto swap app is under development and will be live soon

HOGI NFT Development

Our team is working hard to complete HOGI NFT on Ethereum ERC721 protocol and it will be ready soon.

HOGI GOLD Development

The HOGI GOLD has been launched on the crypto market.

HOGI Token Development

HOGI financial system base token is ready to go into crypto world.

HOGI Real Estate Development

Tokenize your real asset into cryptocurrency and sell or trade instantly. Our team is working hard to launch this platform very soon.

January 2022

May 2022

July 2022

HOGI Pay Development

HOGI pay is our biggest project to manage your financial flow in a secure manner and our team is working hard to complete it on time.

Team Members

The HOGI team combines a passion for different block chain projects and project management. The team is comprised of experienced finance, marketing, development and licensing professionals with a proven record in the industry.
